Printing Categories:

360 UV PRINTING:

360° UV printing delivers high-resolution, full-colour wraparound prints on cylindrical surfaces. Instant UV curing ensures vibrant, durable results that resist fading and wear.

D-EMBOSSING:

D-embossing creates raised or sunken logo effects on PU and leather. A premium finish with depth and texture.

DTF:

DTF printing delivers high-quality, detailed designs on fabrics with ease. Prints are transferred from film to fabric using heat for a durable finish.

EPOXY:

Epoxy coating forms a tough, durable protective layer on metal, plastic, and wood surfaces. It offers excellent resistance to scratches, chemicals, and harsh environments.

MISQAT

EMBROIDERY:

Embroidery adds a premium stitched finish using colored threads and decorative elements.

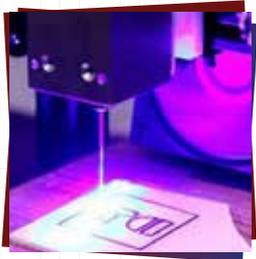

HEAT TRANSFER:

Heat transfer printing uses cut vinyl designs that are heat-pressed onto products for clean, durable customization.

LASER ENGRAVING:

Laser engraving, which is a subset of laser marking, is the practice of using lasers to engrave an object. Laser marking, on the other hand, is a broader category.

LASER MARKING:

Laser marking creates permanent, ink-free marks without physical contact, offering precision, durability, and low maintenance.

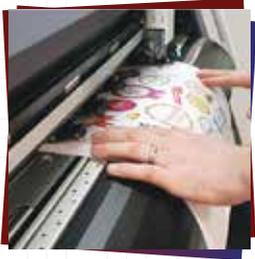

PAD PRINTING:

Pad printing transfers detailed 2D designs onto 3D surfaces using a silicone pad for precise and flexible printing.

MISQAT

PRINT & CUT:

Die-cutting precisely cuts printed stickers into any custom shape using advanced print & cut machines.

UV PRINTING:

UV printing uses ultraviolet light to instantly cure ink as it's printed, delivering sharp, durable, high-quality results.

SUBLIMATION:

Sublimation printing uses heat to infuse dye directly into the material, creating vibrant, permanent, full-colour prints that won't fade or peel.

SCREEN PRINTING:

Screen printing transfers ink onto a surface using a mesh screen and stencil, with a squeegee pressing ink through open areas to create the design.
